

# Digging into the hardware of the Pandemic Treaty

Civil society dialogues with Geneva Missions convened by Geneva Global Health Hub (G2H2)

## Dialogue on Pandemic Prevention

Thursday, 12 October 2023, 15.30-17.30 CEST  
Geneva, International Environmental House

**Pandemic prevention starts with addressing the key drivers of spillovers and other pandemic threats and a systemic understanding of One Health, one that tackles the current industrial and development models that literally destroy ecosystems. Pandemic prevention also requires sustained universal public health systems, people centered care, social protection and fiscal justice, as expressed in numerous WHO declarations. The INB's focus on surveillance, data sharing and "countermeasures" as the main way of prevention is largely insufficient and must be complemented with a much more comprehensive approach.**

Introduction by Nicoletta Dentico, Society for International Development, member of G2H2, followed by an open discussion among all participants (Chatham House Rules).

In a series of exchanges with Geneva Permanent Missions representatives of WHO member states engaged in the INB process, members of the Geneva Global Health Hub (G2H2) will share a set of core ingredients ("hardware") deemed indispensable for a relevant new WHO Convention, Agreement or other Instrument to prevent, prepare and respond to new pandemics.

Follow up sessions, scheduled in November, will specifically refer to the new available text, to jointly analyse possibilities for improvement in the negotiation process.

- Meeting followed by simple reception
- Venue/directions: [International Environmental House](#)
- Language: English, no interpretation available
- By invitation only: [Register here](#)
